Each multiple-choice quiz problem is based on a "root question," from which the system generates different correct and incorrect choices each time you take the quiz.

Thus, you can test yourself on the same material multiple times. We strongly urge you to continue testing on each topic until you complete the quiz with a perfect score at least once. Simply click the "Reset" button at the bottom of the page for a new variant of the quiz.

After submitting your selections, the system will score your quiz, and for incorrect answers will provide an "explanation" (sometimes for correct ones too). These explanations should help you get the right answer the next time around. To prevent rapid-fire guessing, the system enforces a minimum of 10 minutes between each submission of solutions.

[Q1] Consider relation R(A,B,C,D,E) with functional dependencies:

 $AB {\,\rightarrow\,} C, C {\,\rightarrow\,} D, BD {\,\rightarrow\,} E$

Which of the following sets of attributes does **not** functionally determine E?

● ACD ✓	
○ AB	
O BC	
○ ABC	

Answer-Selection Feedback

Yes; ACD⁺ = ACD, so E is not functionally determined.

[Q2] Consider relation R(A,B,C,D,E) with functional dependencies:

 $D \rightarrow C$, $CE \rightarrow A$, $D \rightarrow A$, $AE \rightarrow D$

Which of the following is a key?

Answer-Selection Feedback

Yes; ABE+= ABCDE.

[Q3] Let relation R(A,B,C,D,E,F,G,H) satisfy the following functional dependencies:
